

# Export as Markdown Tables

*Using markdown's table syntax*

## Markdown Tables

Curio exports its tables as markdown tables, with the following considerations:

- While basic markdown doesn't support tables, many extensions such as [MultiMarkdown](#) support a common syntax for markdown tables which Curio uses.
- Markdown only supports a header row, so Curio's footer row and header & footer columns are simply rendered in markdown as normal cells.
- Markdown column alignment syntax is not output since Curio's can be individually specified per cell.
- Each row has a leading and trailing pipe ("|"), which some markdown viewers require, but can be [disabled](#).
