

# Markdown Export

## *Step by step workflows*

---

### Exporting as Markdown

Curio can export an entire project, selected idea spaces, or specific selected figures as markdown!

The result is pretty awesome: a single markdown file (and optional accompanying assets folder) where your Curio text figures turn in markdown rich text blocks, your Curio lists, mind maps, and stacks turn into markdown list blocks, Curio tables into markdown tables, Curio image figures into inline markdown images, asset figures into markdown file links, link figures into markdown links, etc.

You can then view the exported markdown file with your favorite markdown app like [Marked](#) or [MultiMarkdown Composer](#).

#### Export Your Project, Selected Idea Spaces, or Selected Figures as Markdown

1. In Curio, select what you want to export then click the Share toolbar button then choose Export As > Markdown.
2. In the dialog that appears you can choose the location for the export and give it a file name for your export. Note that a single .markdown file will be created with that name containing everything you selected to export.
3. In that same dialog you can optionally specify if you want figure notes and meta exported.
4. You can also specify that images and files should be exported as well. If so, Curio will create folder alongside your markdown export file which will contain those images and files stored within uniquely named subfolders.
5. Click the Export button and your export will be generated.
