Using markdown's list syntax

Markdown Lists

Curio exports hierarchical data such as lists, mind maps, and stacks as markdown lists, with the following considerations:

- While basic markdown doesn't support nested lists, many extensions such as [MultiMarkdown](#) and [CommonMark](#) use tab indentions to indicate nesting, so Curio supports this as well.
- Markdown only supports simple bullets (via the * markup) and numbering (via the 1. 2. 3. markup) so Curio's extensive per-level prefixing is automatically narrowed to those two available options during export.
- The individual text figures that make up the Curio collection figure are converted into markdown's rich text syntax as described above.
- If a list item has line breaks within then those are merged into a single text line for the export.
- Curio will output the * as the list marker for bullets. You can optionally [change this to the - marker](#) if you wish.
- List titles have to be output with a blank line between the title and the actual markdown list, as per markdown rules. Personally I wish it didn't need this but, if it's not there, then lists won't render correctly.
