

List Inspector Bar

Change list properties via inspector bar

To view the list inspector bar changes and inspector panel make sure you have a list selected, like the one below, then use the List buttons on the inspector bar or the List tab in the inspector shelf.

A List

1. Select this list so you can see the changes to the inspector bar and inspector shelf.

Inspector Bar

When a list figure is selected, the inspector bar will reveal some additional controls:

- **List**
Click this button to display the list inspector popover. The same panels are available in the List tab in the inspector shelf.
- **Insert Child**
Click this button to insert a child text figure under the current figure.
- **Insert Sibling**
Click this button to insert a next sibling after the current figure. Note if you hold the Option key down the button will change subtly to indicate that clicking will insert a *previous* sibling *before* the current figure.
