

Dynamic styles, stencils, templates

What's a Master?

In Curio you've been able to create your own reusable figure styles & stencils and idea space styles & templates. You can save these in your personal repository and use them across all of your projects.

You are able to update a style and re-save it to your personal repository. You can then use the updated style with new figures and apply it to existing figures. Likewise you can update a saved personal stencil or template and then create new instances which will reflect those changes.

However, existing figures or idea spaces that used one of those personal styles, stencils, or templates aren't spontaneously updated throughout all of your projects, as that could get quite messy.

Introducing Master Styles, Stencils, and Templates

This changes in Curio Professional with master styles, stencils, and templates. These are private to a specific project which means Curio can support dynamic updates across all the idea spaces in that project.

Create a "Heading" master figure style, use it across your project. Later change the style to a larger point size and color and the style change is instantly reflected across all uses of the figure style.

Create a master figure stencil for an web site interface prototype and use it throughout a project, then later update that stencil with a different fill color and font choices and instantly the change is reflected across the project.

Lastly, create a master idea space template with headings, subheading, and positioned body text. Use it as a basis for dozens of idea spaces in your project. Later, change the master with additional elements, changed fonts, or repositioned figures, and the changes is reflected across your project.
