

The library of your Evernote cloud

Using the Evernote Library

Curio integrates seamlessly with Evernote so you can quickly search for snippets you've collected outside of Curio and easily drag and drop those items into your idea spaces.

What Is Evernote?

Evernote is a multi-platform product and service from Evernote Corporation which allows you to easily capture information in any environment using whatever device or platform you find most convenient, and makes this information accessible and searchable at any time, from anywhere.

Evernote has client applications for macOS, iOS, Microsoft Windows, Windows Mobile, and even a web-based solution. Data collected on any of these clients are automatically synchronized between each other via the evernote.com service.

All clients are free and the service is free with some restrictions, although incredibly full-featured for a free product. Users can also upgrade to a premium service plan for more features. To learn more about Evernote go to <http://www.evernote.com>.

Yinxiang Biji / 印象笔记 / Evernote China

Curio should connect to Yinxiang Biji, Evernote's China-based service, automatically using the user's (a) China-based IP address, and (b) Chinese locale setting in System Preferences > Language & Region.

If this isn't working then type the following into Applications > Utilities > Terminal and re-launch Curio:
defaults write com.zengobi.curio "Evernote Force Host" -string "app.yinxiang.com"

Evernote Business

Curio currently does not work with Evernote Business accounts due to complexities in dealing with these types of accounts.

Log into the Evernote Service

1. Once you have your Evernote account established through their website, <http://www.evernote.com>, click on the Evernote shelf icon within Curio.
2. Enter your Evernote username and password. If requested, this information can be remembered for quick access in the future.
3. Click the Login button to log into Evernote.

Search for Evernote Items

1. All search terms are optional but can include one or more of the following: search text, notebook, tag, kind, and last modified date. Search text is wildcarded at the end (so searching for the word *ever* will find *evernote*, for example) unless the phrase is quoted.
2. You can also specify how the results should be sorted when displayed and what zoom level should be used for the resulting preview images.
3. The results are automatically refreshed as you make your selection changes. You may also click the Refresh button to force a refresh.

Add an Evernote Note to an Idea Space

- Drag the note from the Evernote shelf and drop it into an idea space. When dragging an Evernote note out of the shelf into your idea space, it is normally copied into your project. You can hold down the Command key while dragging to move it to your project, automatically removing it from the Evernote cloud.

Add a Link to an Evernote Note to an Idea Space

- Hold down the Option key and drag the note from the Evernote shelf and drop it into an idea space. This will create an "evernote://" link that, when clicked, will launch the Evernote Mac client and open the referenced note within that application.

Use Quick Look on an Evernote Note

- Press the Spacebar to activate Quick Look on the selected Evernote note.

Open an Evernote Note

- Double-click an Evernote note in the shelf to open it with the Finder.

Delete an Evernote Note

- Select an Evernote note and press the Delete key to delete it from the Evernote cloud.
