

Keynote Export

Export your Curio project to Keynote

Exporting to Apple Keynote

While Curio doesn't support a direct export to Keynote, you can easily create a Keynote presentation using exported images.

Export Your Idea Spaces to Keynote

1. In Curio, click the Share toolbar button then choose Export As > Image. Choose to export JPG images and also create a new folder for the output. This is also where you might want to specify a scaled size for each exported image. Then click the Export button to fill your new folder with image versions of your idea spaces.
2. Launch Keynote and choose the White theme and an appropriate slide size in the window that appears when it launches.
3. In the Finder, select all of the images that Curio exported and drag-and-drop them to the Slides area on the left side of the Keynote window. Drop them just above that initial blank slide that Keynote automatically created for you.
4. Click on the first slide in the Slides area and then choose Edit > Select All to select all the slides and then click the Change Master button in the Format inspector and choose Blank.
5. Scroll down to the very bottom of the Slides area and select the last slide, which is that initial blank slide auto-created by Keynote, and press the Delete key to remove it.
