

# Part 9: Miscellaneous Features

## Figure Stacks

Curio now allows you to quickly flip through a stack of figures, such as index cards, arranged on the idea space.

Hold the Command-Option keys down and use your mouse scroll wheel to quickly scan through the stack of figures under the mouse pointer. Note the figures don't even have to be selected beforehand.

Curio determines the stack by looking at all figures under the mouse pointer and expands that set to include all figures those figures themselves overlap.

Hover the mouse over the index cards above then hold the Command-Option keys down and use your mouse scroll wheel to quickly scan through the stack.
