

# Part 2: Working with Figures

## YouTube and Vimeo

### Inserting a YouTube or Vimeo Movie

Use the Insert button on the toolbar and choose either a YouTube Video or Vimeo Video.

You will then be able to paste in the URL to the video. This should be the URL to the video, not the embed code.

### Automatic WebView

Curio will then parse the URL to extract out the actual movie name then turn it into an embeddable URL. A WebView of the correct size is then created, the embed URL is set, and the resulting WebView is placed on your idea space ready for viewing
