

# Part 2: Working with Figures

## Figures

### What is a Figure?

In Curio, everything on an idea space is a figure. Examples include a text figure, a line figure, an image figure, or an asset figure which represents a document that you dragged in from the Finder.

### Selecting Figures

With the Select tool active, you simply click a figure to select it, or drag out a selection rectangle on the background of the idea space to select several items.

### Moving

Drag the figures around with the mouse or the arrow keys on your keyboard.

### Resizing and Rotating

You can resize a selected figure using the selection handles on the sides of the figure. If you hold down Command the handles can be used to rotate the figure.

### Deleting

Press the Delete key to remove a figure from your idea space.

Here is a nice, styled text figure.
