

# Part 9: Miscellaneous Features

## Calendar Syncing

Specify a calendar and reminder list for Curio to use to sync your events (items with start dates) and todos (items with no dates or with only due dates).

The sync framework requires that the calendar and reminder list names must be different from each other. They can be local or hosted on iCloud if you wish.

Use Lion's iCal to create a new calendar and new reminder list. In Mountain Lion use the Calendar and Reminders apps to do the same thing.

You can either make project-specific calendars or a common calendars for all your Curio projects. For example, you could create a *Curio* calendar and a *Curio Tasks* reminder list that you share with all your projects, or you can be project-specific: *Curio ProjectX* and *Curio ProjectX Tasks*.

### Actions Menu Extras

Click the actions “gear” button to see more calendar sync options.
