Part 1: Introduction

What is Curio?

We designed Curio to be the premier note taking, mind mapping, brainstorming, and task management application. Curio encourages visual thinking within its innovative virtual whiteboard environment. With visual thinking, you can intuitively gather, associate, and recall your notes, ideas, and documents naturally and visually.

Curio encourages this with an integrated collection of tools and functionality that's unlike any other application solution. With Curio, you'll be more effective and efficient when working on your projects.

Whether you are managing a complex design project, figuring out your backyard landscaping, or working on your term paper, Curio's set of tools and intuitive interface will encourage effective note gathering, research, and creative exploration.

Once you're hooked on Curio, you'll never go back to your traditional notebook or whiteboard.

What's a Curio Project?

A real-world project is your class, your thesis, your ad campaign, your next product release, your lab experiment, or your next sermon. It's something you're working on; something that you're creating.

Your Curio project is the same thing but on your Mac. It contains *everything* related to your project including notes, sketches, files, weblinks, images, brainstormings, ..., everything!
