Part 9: Miscellaneous Features

Spread PDF

Curio can spread the pages of a PDF across multiple idea space for easy annotations and note-taking.

Spreading Across a Single Idea Space
Select a PDF and any other figures then right-click on the selected figures and choose Singe Page Spread PDF. A prompt where you can specify how many pages (up to 20) that you wish to spread. Curio will then spread the figures down the idea space, adjusting equal PDF figure to show the subsequent page.

Spreading Across Multiple Idea Spaces
For longer PDF documents, start by spreading a few pages, say 4 or 5 pages, on a single idea space using the technique above. Then right-click on the idea space itself in the Organizer and choose Spread PDF and Curio will duplicate that initial template idea space as many times so that all pages of the PDF are represented in idea spaces. For example, your 100 page PDF with 5 pages displayed on that initial idea space, will turn into 20 idea spaces each showing the next 5 pages.
