Quick Tips

Some helpful tips to use within Curio

Quick Zoom
Press and hold the **q** key to quickly zoom out and see the entire idea space.

Hover you mouse pointer over a particular area and when you release the **q** key your view will be restored centered in that area.

Right Click
Curio uses context menus throughout the interface so be sure to **right-click** on figures, idea spaces, items in the shelf, the various galleries, and much more to see what quick options you have available to you.

Quick Find
Press ⇧⌘F to bring up Curio's Quick Find popover to quickly find and jump to your idea spaces and figures.

Search for text, tags, resources, dates, ratings, priorities, and more. Boolean logic, parentheses, regular expressions, and saved queries are also supported!

Escape
The **Escape** key is used for many things within Curio. Tap it to end text figure editing, to dismiss an inspector popover, to select a collection figure if an item within is selected.

Navigation
The top right corner of the inspector bar, just under the toolbar, shows a small navigation bar you can use to navigate within the project.

The two small up and down arrows go to the previous or next idea space in the Organizer and have the ⌘↓ and ⌘↑ keyboard shortcuts.

The two small left and right arrows go backwards and forwards in history, like in your browser, and have the ⌘← and ⌘→ keyboard shortcuts.
